Overview
A Milestone Certified Design Engineer (MCDE) should have the ability to design Milestone IP surveillance systems of high complexity.

In order for Milestone to attest that you have this knowledge and these skills, you must pass an MCDE assessment that may touch on any of the tasks listed in following section. The assessment will include test items associated with any of the following tasks, concepts, and product features:

- Define surveillance objectives
- Complete a site survey
- Define image quality
- Select cameras and determine placement
- Identify workstation and displays
- Identify key system requirements
- Select product and product features
- Specify network topology and bandwidth
- Create a proposal and determine licensing
- Define system and operator behaviors

Before you take the MCDE assessment, ensure that you have the knowledge and skills to perform all tasks and steps listed above by consulting the list of resources provided in this document. You are allowed to access these resources during the test. However, you have only two hours to complete the test and you must already be very familiar with the entire list of content here for you to be successful.

eLearning
You can access Milestone eLearning courses by following the link below and logging into the Partner Learning Portal:

The Milestone Design Engineer training track includes eLearning courses that directly support preparation for the MCDE.

Training Track information is available in the eLearning section of the Partner Learning Portal.

Coursework:
- The Milestone Solution Design course
